The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 7-9 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The claims recite a "clamping step", but it is clear from the specification that the claimed heat exchanger is already "completely assembled" prior to being disposed in the nominally recited "clamping apparatus" (page 5). It is not clear how a fully mechanically assembled and joined (presumably through expansion/press fit joints, as in Banzhaf) exchanger is to be further "clamped", i.e. pressed so as to have its parts held in assembled relation. Clearly a compression band or other clamping means surrounding the tube bundle would not work as the tube bundle is within the housing and inaccessible; similarly such a clamping means would have no effect on the outer housing absent the application of substantial force to distort the housing and compress it against the tube sheet.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 6-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Banzhaf.

Banzhaf shows a welded heat exchanger in which the tube ends are welded to the tube sheet, and the tube sheet is welded to the housing using laser welding.

Regarding the method claims, to the extent that the applicant's disclosed heat exchanger assembly, which is "completely" "mechanically joined and assembled", can be said to be "clamped", Banzhaf's core and housing assembly, fully mechanically assembled via light press fit (bottom of column 4) is similarly "clamped", i.e. parts held in assembled relationship to prevent movement during final welding.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Allen J. Flanigan whose telephone number is (571) 272-4910. The examiner can normally be reached on M-F 9:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cheryl Tyler can be reached on (571) 272-4834. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
